

In this video, we'll show you how to add a new theme in Gridlex Zip. We provide two types of themes, which includes the theme that is applied on the organization page and the other one which is applied on the contacts page. Users have the flexibility to choose the elements they want to view, personalize their custom fields and column order. In addition, we'll show you how to map your theme to organizations.

If you need any help with any feature, data migration of your old data, or anything at all, just email [apps@gridlex.com](mailto:apps@gridlex.com) and our team will be here to help you. Remember, that one of **Gridlex's** core values is Customer Success. We want you to be successful.
