

GeoTrack is a feature in Gridlex Ray HRMS software that can be used to manage attendance of the employees as it can track the location of employees while marking their attendance. This helps in preventing time fraud and provides accurate records of employee attendance. In addition, companies that have field service employees, GeoTrack can be used to track their location and monitor their activities to ensure that they are fulfilling their assigned tasks and visiting the correct locations.

If you need any help with any feature, data migration of your old data, or anything at all, just email apps@gridlex.com and our team will be here to help you. Remember, that one of **Gridlex's** core values is Customer Success. We want you to be successful.
